

C/C++ source

LLM auditor (Claude Code + klee-mcp-triage skill)
enumerates candidates, declares taints / semantic bounds,
authors a wrapper TU for library APIs

candidate JSON

symex-validator MCP server (this work)

`auto_harness` → `harness.c`

`verify_vulnerability` → KLEE (podman)

`check_reachability_tool` → `entry→target` probe

`emit_reproducer` → `reproduce.c` + `poc.bin`

{confirmed | infeasible | timeout}, exploitability,
concrete inputs, disclosure-ready reproducer
